Instructions & information for LTM450 Systems

LTM450-LT Lightning & Thunder

LTM450-ME Mine Explosion

LTM450-HH Haunted House

Power Requirements:

12 volts DC from a source that can supply up to 1 amp.

You need to **observe the polarity** when connecting up the power. However you will not damage the modules if you connect the power backwards.

You can use **one** any size 8 ohm speaker.

CAUTION!! DO NOT STARE DIRECTLY INTO THE LED LAMP AS IT IS EXTREMELY BRIGHT!!

When power is turned on for the Mine scenario, or Haunted House scenario, it will play 1 time and then stop. The big LED lamp will flash as required during each scenario.

For the Mine or Haunted House to replay, press the Reset Button only after the cycle has completed. If you push the reset button during play, it will throw it out of sync.

The Lightning and Thunder scenario, will automatically repeat after 2 minutes.

For this configuration you should not use the reset button.

Just power it on and off as required

LTM450 systems include:

1 Sound module board, 1 Lamp controller board, and 1 12 volt 4 watt LED lamp.

User required items:

Power source, any size 8 ohm speaker, switches, hookup wire (suggest 22 Gauge Solid)

Some soldering may be required
